SUBJECT INDEX

Compiled by Diane Albin

A

A1 hnRNP protein: nucleic acid renaturation 181
A5 protein: adhesive domain 40
acetylated low-density lipoprotein receptors 237
aconitase: iron–sulphur dependent dehydrations 298
actomyosin molecular motors: nanomanipulation 319
acute intermittent porphyria (BR) 355
acylation: transducin (L) 164
adhesive domain: MAM 40
β-adrenergic receptor kinase
  coiled-coil domain 315
  PH domain 343
affinity binding: immunoglobulin binding protein, BiP 3
aldehyde dehydrogenases: lens constituent 303
alkaline protease: β-superhelix motif 313
allosteric signal transduction: haemoglobin 385
Alzheimer's disease 480
amino acids: titration curves 69
aminopeptidases
  action mechanism 167
  methionyl: evolution 403
Amplify program (CC) 448
amyloid plaques: Alzheimer's disease 480
amyloid precursor protein 480
annexins: molecular phylogeny 462
antigens
  HPC-1 124
  human leucocyte, class II 140
antisense RNA, gene silencing 419
apo-α-lactalbumin: molten globule state 1
apoptosis
  mammalian cells 307
  neurons 157
ARF proteins: ER–Golgi transport role 3
arginino-succinate lyase: lens constituent 302
association rates: macromolecular 181
ATP hydrolysis 116
ATP-dependent organic anion transporter (L) 164
autoimmune diseases 140
autophosphorylation: receptor tyrosine kinases 273
azurin 115

B

bacteria
  cell-surface proteins 136
  enzyme sequence similarities 466
  genetics (BB) 193
  Gram-negative: protein secretion 7
  L-serine dehydratases 297
  toxins: membrane-insertion domain 391
  transmembrane solute transporters 13
bacteriophage plaques: lambda library contamination (CC) 484
baculovirus expression vectors (BR) 110
β-barrels: triose phosphate isomerase 313, 372
base-pairing: tautomerism 160
bcl-2 gene: apoptosis inhibition 308
bestatin: aminopeptidase inhibition 168
βγ complexes 292, 315
BIK1, *S. cerevisiae* 82
biomolecular processes: computer modelling (BR) 311
biochemical equations: K' 288
biochemical organization 405
biochemistry, general (BR) 62, 354
bioenergetics, general (BR) 189
biogenesis (BR) 230
BioGopher servers (CC) 485
bionet (CC) 446
BIOSCI newsgroups (CC) 310
BiP: high-affinity binding 3
botulinum neurotoxin 324
bovine lens leucine aminopeptidase 167
brain-derived neurotrophic factor 49
Brefeldin A 214
bulletin boards (CC) 145

C

C-type lectins, animals 224
calcium flux regulation: inositol phosphates 53
calcium-independent protein kinase Cs 207
calmodulin
  α-helices 116
  nitric oxide synthases regulation 35
cAMP-dependent protein kinase
  β-adrenergic receptor phosphorylation 276
  crystal structure 84, 120
  targeting subunits 175
Candida boidinii: PMP47 protein 427
capillary electrophoresis 409
carboxy-terminal domain: RNA polymerase II 117
carnitine palmitoyltransferase I: role in ketogenesis 28
catechols 437
cationic detergents: nucleic acid renaturation 181
cdc2 gene 195
cdc25: CL100 similarity 377
cell adhesion proteins
  MAM: adhesive domain 40
cell cycle
  cyclin-dependent kinases 195
  differentiation: Ras activation by receptor tyrosine kinases 273
  elongation: lens formation 303
  neurons 157
  P-domain peptide role 239
  proliferation: hypusine role 475
  RCC1 96
cell death *see also* apoptosis
  mammalian cells 307
  neurons 157
cell regulation factors 125
cell signalling: inositol phosphate 53
cell-surface proteins: bacteria 136
cereal lectins 223
chaperonins 81
chloroplast genome introns, *E. gracilis* 467
chloroplast ribosomal proteins: molecular genetics 177
chloroplasts: thylakoid membranes 415
chromatin
  assembly 90
  RCC1 interaction 99
chromophores: spectroscopy 74
chromophytes: thylakoid membranes 418
chromosome
  condensation regulator (RCC1) 96
  structure maintenance, Lrp 260
chronic granulomatous disease 43
cis-acting elements: tRNA splicing, yeast 33
citrovorum factor: one-carbon metabolism role 102
CL100 gene, human 377
class II human leucocyte antigens 140
clinical conditions: human diseases (BR) 62
Clostridium: neurotoxins 324
co-translational transport
  mitochondrial proteins 366
  secretory proteins 456

coiled-coil domains
α-keratin 360
G proteins 315
Cold Spring Harbor (BR) 269
colicin: membrane-insertion domain 391
collision theory: macromolecules 181
complementarity: rRNA–mRNA 406
complex polysaccharides: assembly in plants 210
computer modelling: biomolecular processes (BR) 311
computer networks
BIOSCI newsgroups (CC) 310
Internet (CC) 107, (BR)231, (CC)297, (CC)398, (CC)446, (CC)448, (CC)485
computers for molecular biologists (CC) 57
control analysis 26
cooperativity: haemoglobin 385
creatinase: evolution 403
Crohn's disease 242
crystallins: eye lens 301
cyanobacteria: thylakoid membranes 418
cyclic amplification and selection of targets 77
cyclin-dependent protein kinases
cell cycle 195
targeting subunits 175
cyclins 195
cyclosporin A: action mechanism 334
cytochromes: flavocytochrome *b* 44
cytoplasmatic linker protein-170 82
cytoskeleton-associated proteins 82
cytosolic polysomes: mitochondrial protein import 367

D

degenerative diseases: nervous system 157
dehydratases: L-serine/threonine 297
dehydrogenases
flavoprotein 44
lens constituents 301
developmental mechanisms: evolutionary conservation (BR) 401
diazotrophs (BR) 109
dictionary
NMR concepts (BB) 192
science and technology (BR) 190
Dictyostelium discoideum
antisense RNA: gene regulation 421
inositol pyrophosphates 55
differential scanning calorimetry: protein folding energetics 2
dihedral angles 317, (L) 464
diphtheria toxin: membrane-insertion domain 391
DNA
analysis: capillary electrophoresis 412
binding sites: CASTing 77
damage checkpoint mechanism 433
oxidative damage (BR) 486
packaging 202
replication 202
DNA Strider (CC) 187
DNA-activated protein kinase 433
DNA-binding proteins
low sequence specificity, multimeric complexes 202
TFIIIA 226
DNASTAR (CC) 187
Drosophila melanogaster: cytoskeleton-associated protein 82
drug-resistance proteins 13
dynein-associated protein 82

E

electrogenic ion pumps (BR) 63
electrokinetic processes (BR) 64
electron light microscopy (BR) 450
electron transport chain: NADPH oxidase 43
electronic mail (CC) 267, (CC) 398
electrophoresis (BB) 64
capillary 409
elongation factor Tu 155
encounter-limited reactions: rate constants 181
endocytosis: eukaryotic cells 355
endonuclease
iron–sulphur clusters 153
yeast tRNA splicing 31
endoplasmic reticulum
membrane transport 453, 456
protein retention 3
energy-selective optical spectroscopy: proteins 71
energy transduction: haemoglobin 385
engrailed homeodomain proteins: molecular phylogeny 461
enzymes
as a mechanical device 115, 197
catalytic function diversity 372
evolution 403
immunoassay: genetically prepared conjugates 279
nomenclature 113, (BR) 192
epidermal growth factor receptors 273
epimorphin 124
equilibrium constant: K' 288
ERD-2 gene, yeast 3
Erwinia chrysanthemi: pectate lyase C 313
Euglena gracilis: chloroplast genome introns 467
eukaryotes
antisense RNA 419
membrane traffic 395
mRNA transcripts: spliceosomal system 31
secretory pathway 3
eukaryotic initiation factors 429, 475
even-skipped homeodomain proteins: molecular phylogeny 460
evolution
bacterial cell-surface proteins 136
chloroplast ribosomes 177
enzymes 372, 403
major facilitator superfamily proteins 13
metazoan 459
exocytosis: control 5
exopolyphosphatase 247
exotoxin 393
eye lens crystallins: gene recruitment 301

F

farnesyltransferase
inhibitors 349
sequence repeats 426
fatty acid-binding domain: NMDA receptor 41
fibroblast growth factor receptors 273
fidelity-enhancement: mRNA splicing 381
FITSIM program (CC) 58
FK506: action mechanism 334
flavocytochrome *b*: electron transport in NADPH oxidase 44
flavoprotein dehydrogenase 44
fluorescence line narrowing spectroscopy 74
FMR1 gene: fragile X syndrome 331
folinic acid: one-carbon metabolism role 102
Fourier-transform infrared spectroscopy 198
fragile X syndrome: *FMR1* gene 331

G

G proteins *see* GTP-binding *and* heterotrimeric G proteins
GAL1/GAL10 genes, *S. cerevisiae* 90
β-galactosidase: radiation target size 237
GcL, *G. candidum* 20
gene expression
antisense-regulated 419
lens cells 304
translational control 429
translational introns 294
gene fusion: preparation of enzyme conjugates 279
gene recruitment: eye lens crystallins 301
gene transcription *see* transcription
general regulatory factors 91
genetics, molecular (BR) 451
Geneworks (CC) 188
Geotrichum candidum: GcL 20
glucocorticoids
apoptosis stimulation 308
nucleosome disruption 90
glued gene product, *D. melanogaster* 82
glycolytic enzymes: Type I aldolase 36
glycoproteins
plants 210
radiation target size 237
Golgi apparatus
KDEL receptor 3
KDEL sequence 395
plants 210
retrieval and retention mechanisms 395
SNAPs 453
SNAREs 453
TGN38 4, 397
trans-Golgi network 395
Gopher system (CC) 107, (CC) 485
Gram-negative bacteria: protein secretion 7
grana stacks, plant chloroplasts 415
growth factors and receptors
apoptosis inhibition 308
nerve growth factor 48
platelet-derived growth factor 49, 273

SH2 domains 273, (L) 464
transforming growth factor β2 49
GS-X pump (L) 164
GTP-binding proteins 3
ARF 3
rab 3, 4
rac 43
rap 46
Ras 43, 250, 273, 349
see also p21^{ras}
guanosine pentaphosphate phosphatase 247

H
H^+ symporter proteins 13
haemoglobin
binding energy transduction 385
oxygen affinity 53
Harrington, William Fields (O) 364
HDEL receptor, yeast 3
heat shock proteins 125
helper T lymphocytes 140
heterotrimeric G proteins 275, 315
α-subunit 4, (L) 164, 292
βγ subunits/complexes 292, 315
HIV1 *see* human immunodeficiency virus
HMG-CoA pathway: ketogenesis role 28
HOM/HOX homeodomain proteins: molecular phylogeny 460
homeodomain proteins: molecular phylogeny 459
hormone-sensitive lipase 466
HPC-1 antigen: epimorphin sequence similarity 124
human
CL100 gene 377
haemoglobin: binding energy transduction 385
hormone-sensitive lipase 466
leucocyte antigens, Class II 140
neurotrophins 50
pancreatic lipase (hPL) 20
protein data (BR) 190
WRS gene 263
human diseases
autoimmune 140
clinical condition (BR) 62
immunodeficiency virus (HIV-1) 255, 307
human immunodeficiency virus (HIV-1)
apoptotic cell death 307
regulatory proteins 255
hydrogen exchange rates: proteins 359
hydrolysis
aminopeptidases 167
ATP 116
hydroperoxides 437
hydrophobicity curvature (L) 81
hyperphosphorylation: carboxy-terminal domain 117
hypusine: eukaryotic cell proliferation role 475

I
immediate–early genes: activation by interferons 338
immune response
autoimmune diseases 140
src family tyrosine kinases regulation 215
immunoglobulin heavy chain binding protein: BiP 3
immunosuppressive drugs: action mechanism 334
import: mitochondrial proteins 66
infrared difference spectroscopy: reaction-induced 197
inositol polyphosphate 5-phosphatase 378
inositol phosphates 53, (BR) 271
insecticidal δ-endotoxin: membrane-insertion domain 391
integral membrane protein localization: eukaryotic cells 395
interfacial activation: triacylglyceride lipases 20
interferons
signalling 338
tryptophanyl-tRNA synthetase induction 263
intermediate compartment: ER-Golgi 3
intermediate filaments: α-keratin structure 360
Internet (CC)107, (BR)231, (CC)267, (CC)398, (CC)446, (CC)448, (CC)485
intramolecular chaperones: protein folding role 442
intronic snRNA (L) 330
introns
E. gracilis chloroplast genes 467
translational 294
ion channels: NMDA receptor 41
iron metabolism: eukaryotes 432
iron-responsive element binding protein 298
iron–sulphur clusters 153
bacterial L-serine dehydratases 297
isoenzymes: nomenclature 114

J
Johnson, William Arthur (O) 61

K
K', equilibrium constant 288
KDEL
receptor 3
retention mechanisms 395
α-keratin: structure 360
β-ketoadipate pathway: evolution 373
ketogenesis: top-down control analysis 28
kinases *see also* specific kinase entries
cAMP dependent 84
hinge motions 116
phosphoglycerate: folding intermediates 2
kinetic mechanisms: computer evaluation (CC) 58
kinetic proofreading 381
KINSIM program: reaction mechanism evaluation (CC) 58
Krebs cycle 61
intermediates 13
Kunitz-type protease inhibitor superfamily 208, (L) 424, (L) 425

L
lac system, *E. coli* 472
lactate dehydrogenase B: lens constituent 301
laminin: molecular phylogeny 462
lateral proton conduction: lipid-water interfaces 243
lectin-like interactions: P-domain peptides 239
lectins 221
legume lectins 221
lens crystallins: gene recruitment 301
leucine-responsive regulatory protein (Lrp) 260
leucocytes
antigens, class II human 140
cell-surface receptor-mediated signal transduction 215
leucovorin: one-carbon metabolism role 102
ligase: yeast tRNA splicing 32
ligation reaction, ultrasonic (CC) 446
limonene: farnesyltransferase inhibition 357
linoleic acid: transducin acylation precursor (L) 164
lipases
hormone-sensitive 466
triacylglyceride: molecular structure 20
lipid modification, proteins (BR) 400
lipocalins (L) 206
lipoprotein
analysis (BR) 192
low-density: radiation target size 237
Lowe's oculocerebrorenal syndrome 378
lymphocyte
activation: *src* family tyrosine kinases 215
helper T 140
NADPH oxidase 43
lysozyme: motion 116

M
MacDNAsis Pro (CC) 187
macromolecular association: rate 181
MacVector (CC) 187
major facilitator superfamily 13, (L) 248
MAM: adhesive domain 40
mandelate pathway: evolution 372, 403
Mantoniella: thylakoid membranes 417
manumycin: farnesyltransferase inhibition 350
MAP kinases
cascade 128
phosphatase: CL100 377
membrane
fusion (L) 81, 453
insertion: bacterial toxins 391
lateral communication 243
surface curvature (L) 81
transport 395, 453, 456
membrane proteins
PMP47 427
targeted membrane fusion 324, 327, 453
meprin: adhesive domain 40
messenger RNA
antisense: gene silencing 419
splicing: fidelity-enhancement 381
splicing: snRNAs 131
transcripts, eukaryotes: spliceosomal system 31

translation initiation 406, 429
metabolism
control analysis 26
leucovorin role 102
metalloproteases: molecular phylogeny 461
metazoan phylogeny 459
methionyl aminopeptidase: evolution 403
microfibrils: α-keratin structure 360
mimicry, molecular: bacteria cell-surface proteins 136
mitochondria
ketogenesis: rat liver 28
peptidases: nomenclature (L) 249
protein import and synthesis 366
mitochondrial solute carrier proteins 427
mitogen-activated protein kinases *see* MAP kinases
molecular biology
computers (CC) 57, (BR) 311
molecular genetics (BR) 451
motor proteins: actomyosin 319
mouse
nerve growth factor 48
neurodegenerative disorders 157
mRNA *see* messenger RNA
msh homeodomain proteins: molecular phylogeny 461
mucins: P-domain 239
muconate lactonizing enzyme 373, 403
Multalin 4.0 (CC) 106
multimeric complex DNA-binding proteins 202, (L) 424
mutagenesis: tautomerism role 160
myoglobin: folding energetics 1

N

N-linked glycans: assembly role of Golgi apparatus 211
NAD *see* nicotinamide adenine dinucleotide
NADP *see* nicotinamide adenine dinucleotide phosphate
nano-manipulation *in vitro*: actomyosin molecular motors 319
NEM-sensitive fusion protein: membrane fusion role 453
nerve growth factor 48
neurofibrillary tangles: Alzheimer's disease 480
neurodegeneration 157
neuropeptides: molecular phylogeny 461
neurotoxins, clostridial 324
neurotransmitters
blockage by clostridial neurotoxins 325
release inhibition: tetanus toxin 327
neurotrophins 49
neutral lipases: molecular structure 20
Nicotiana
genomic lambda library: contamination (CC) 484
Golgi apparatus 210
nicotinamide adenine dinucleotide 278
nicotinamide adenine dinucleotide phosphate 278
NADPH oxidase 43
nitric oxide synthases 35
nitrogen fixation (BR) 109
nitrogenase iron protein: iron–sulphur clusters 153
nitrogenase molybdenum–iron protein: iron–sulphur clusters 153
NK homeodomain proteins: molecular phylogeny 461
NMDA receptor 41
NMR, dictionary (BB) 192
NOGGIN 208, (L) 424, (L) 425
nomenclature 113
enzymes (BB) 192
mitochondrial peptidases (L) 249
nuclear pre-mRNA introns 467
nucleic acid: renaturation 181
nucleolar RNA 131
nucleosomes: transcription regulation function 90
nucleotides: tautomerism 160

O

O-linked glycans: assembly role of Golgi apparatus 212
oligomeric proteins 65
oncogenes *see also* proto-oncogenes
acquisition by retroviruses 233
bcl-2, apoptosis inhibition 308
oncogenesis 157
one-carbon metabolism: leucovorin role 102
organic phosphate esters: antiporters 13
organization, biochemical 405
oxidases: NADPH 43
oxidative damage
DNA (BR) 486
proteins and ageing 437

P

P-clusters 153
P-domain peptides 239
P-glycoproteins (L) 164
p21^{rap} protein 46
p21^{ras} protein
activation 273
effector interactions 250
PAC-1 gene, human 378
pancreatic lipase (hPL) 20
pathogens: killing and digestion: NADPH role 43
PCR *see* polymerase chain reaction
pectate lyase C 313
Pep12p: epimorphin sequence similarity 124
peptidases: nomenclature 114
peptide analysis: capillary electrophoresis 411
peptide bonds: dihedral angles 317
Peptostreptococcus asaccharolyticus: L-serine dehydratases 297
periplasm: protein secretion, Gram-negative bacteria 8
peroxisomal membranes: PMP47 protein 427
phagocytes: NADPH oxidase 43
phase III detoxification reaction (L) 164
phosphatases
CL100 377
E. coli 247
targeting subunits 172
VH1 6
phosphates
inositol 53, (BR) 271
phosphatidylinositol 3-kinase 378
phosphoglycerate kinase
folding intermediates 2
hinge motions 116
phospholipases
A_2 activating protein 292
C 53, 403
phosphorylation
abnormal: tau protein 480
carboxy-terminal domain 117
DNA-activated protein kinase 433
MAP cascades 128
reversible, proteins 172
rhodopsin 275
tyrosine, leucocyte signal transduction role 215
phosphotransferase: yeast tRNA splicing 32
photoreceptors: protein kinase C 275
photosystems: thylakoid membrane role 415
phycobilisomes, cyanobacteria 418
phylogeny: metazoan 459
plastic gene transcripts: splicing system 31
platelet-derived growth factors
receptors 273
structure 49
pleckstrin homology: PH domain 343
PLP-dependent L-threonine dehydratases 297
PMP47 protein 427
polyamines: cell growth 477
polygalacturonic acid/rhamnogalacturonan-I 213
polymerase chain reaction
Amplify program (CC) 448
CASTing 77
contamination (CC) 447
polymeric domains: macromolecular association 181
polymerization: proofreading mechanism 381
post-translational import: mitochondrial proteins 366
poxvirus DNA-dependent ATPases 291
pre-mRNA: splicing 117
pre-tRNA: splicing 31
prenylation: proteins 349
primary biliary cirrhosis 141
programmed cell death *see* apoptosis
prolidases: evolution 405
proofreading, kinetic 381
propeptides: protein folding role 442
protein analysis
capillary electrophoresis 411
e-mail servers (CC) 267
Geneworks (CC) 188
protein data
Data Bank 65
human (BR) 190
protein folding
BiP-binding role 3
chaperonin 81
energetics 1
pectate lyase C 313
propeptide role 442

slow-exchange core 359
protein kinase Cs
calcium-independent 207
PH domain 343
rhodopsin desensitization 275
protein kinases
cAMP-dependent 84, 120
mitogen-activated (MAPK) 128
molecular phylogeny 461
targeting subunits 172
protein phosphatase-1: targeting subunits 172
protein sequence motifs
calcium-independent protein kinase Cs 207
chaperonin 81
CL100 gene 377
cytoskeleton-associated proteins 82
epimorphin 124
farnesyltransferase 426
FMR1 gene 331
hormone-sensitive lipase 466
lipocalins (L) 206
MAM 40
NMDA receptor 41
NOGGIN 208, (L) 424, (L) 425
PMP47 427
polyphosphates 247
polyphospholipase A_2 activating protein 292
related GAP domains 378
SNF2 family 291
protein sequences
alignment: Multalin 4.0 (CC) 106

protein structure (BR) 270
dihedral angles 317, (L) 464
evolution 372
β-roll motif 313
secondary structure 120
size, shape and function 65
protein synthesis 155
tRNA function (BR) 356
protein tyrosine kinases *see* tyrosine kinases
protein–protein interaction (BR) 450
Kunitz domain 208
P-domain peptides 239
p21^{ras} protein 250
PH domain 343
transcription factor 77
tyrosine phosphorylation role 219
proteins
bacteria cell-surface 136
chloroplast ribosomal 177
disorder 71
homologous: evolution 403
interaction (BR) 450
iron–sulphur clusters 153
lipid modification (BR) 400
major facilitator superfamily (L) 248
mitochondrial, import and synthesis 366
molecular phylogeny 461
multimeric complex dsDNA binding 202
nomenclature 113
prenylation 349, 426
radical-damaged: accumulation 437
reaction-induced infrared difference spectroscopy 197
retention in endoplasmic reticulum 3
reversible phosphorylation 172
size, shape and function 65
solute transporters 13
secretion: Gram-negative bacteria 7
targeting (BR) 191
toxins: membrane-insertion domain 391
translocation across ER membrane 456
protonic networks: membranes 243
proto-oncogenes 233 *see also* oncogenes
trkA 51
pseudomonads
exotoxin 393
mandelate pathway evolution 372
Pul protein homologues 9
Pul proteins 8
Purkinje cell, death 157
pyrophosphates: inositol 55

R

Rab proteins
ER–Golgi transport role 3
S. pombe 4
rac proteins 43
racemases, mandelate 372, 403
radiation target analysis 236
radical-damaged proteins, accumulation 437
Ran: RCC1 interaction 99
rap proteins 46
rapamycin: action mechanism 334
Ras proteins 43, 250 *see also* p21^{ras}
activation by protein tyrosine kinases 273
farnesyltransferase 349
RCC1 protein 96
reaction-induced infrared difference spectroscopy 197
reaction mechanisms: computer programs (CC) 58
RecA protein, *E. coli* (L) 424
receptor kinases
β-adrenergic 315
receptor protein tyrosine phosphatase μ: adhesive domain 40
receptors
common adhesive domain 40
NMDA 41
protein tyrosine kinase 215, 273
regulatory factors, transcriptional 90
replication, DNA: multimeric complex binding proteins role 202
restin 82
restriction enzyme mapping, DNA Strider (CC) 187
retinol G proteins: transducin (L) 164
retroviruses 233
Rev proteins 255
reversible associations: quantitative characterization 284
reversible transcription: retroviruses 233
Rhizomucor miehei: RmL 20
rhodopsin: desensitization 275
ribonucleoprotein A1 421
ribosomal proteins, chloroplast 177
ribosomal RNA
protein synthesis 155
transcription processing, snoRNA 131
translation initiation role 406
RmL, *R. meihei* 20
RNA *see also* messenger, pre-, ribosomal *and* transfer RNA
antisense: gene silencing 419
binding: TFIIIA 227
metabolism: *FMR1* gene 331
processing: carboxy-terminal domain role 117
recognition: HIV-1 regulatory proteins 255
RNA helicases 125
RNA polymerase II 90
carboxy-terminal domain 117
rRNA *see* ribosomal RNA
β-roll motif 313

S

Saccharomyces cerevisiae
cytoskeleton-associated proteins 82
GAL1/GAL10 genes 90
immunosuppressive drugs 334
MAP kinase cascade homologues 129
SH2 domain (L) 464
snRNAs 131
tRNA splicing pathway 31
yeast VH1 (YVH1) 6
α-sarcin loop, translocation 155
Schiff base-forming Lys 37
Schizosaccharomyces pombe
cdc2 gene 195
cdc25 protein 6
MAP kinase cascade homologues 129
membrane traffic model 4
science and technology, dictionary (BR) 190
secretory pathway
eukaryotic cells 3, 395
proteins: Gram-negative bacteria 7
secretory proteins
P-domain peptides 239
sedimentation equilibrium measurement and analysis 284
self-splicing RNA systems 31
sequence alignment: Multalin 4.0 (CC) 106
sequence analysis
by e-mail (CC) 267
computer programs (CC) 187
sequence homology
calcium-independent protein kinase Cs 207
cytoskeleton-associated proteins 82
epimorphin 124
serine dehydratases 297
SH2 domain, yeast (L) 464
signal transduction pathways
endoplasmic reticulum membrane translocation 456
effector-protein activation 292
haemoglobin 385
inositol phosphates 53
interferons 338
leucocytes, cell-surface receptor

mediated 215
MAP kinase cascade 128
p21^{ras} 250
phototransduction 275
Ras activation by receptor tyrosine kinases 273
RCC1 100
T cell receptor 334
tools for elucidating 334
slow-exchange core: protein folding 359
small nuclear RNA (snRNA) 131, (L) 330
SNAPs 453
SNAREs 453
SNF2 family proteins 291
snoRNA *see* nucleolar snRNA
snRNA *see* small nuclear RNA
soluble proteins 65, 453
solute transporter proteins 13
Southern blots (CC) 484
spectrin: molecular phylogeny 462
spectroscopy
energy-selective 71
Fourier transform 198
reaction-induced infrared 197
spliceosomal snRNA 131
spliceosomal system: eukaryotic mRNA transcripts 31
splicing
introns: *E. gracilis* chloroplast genes 467
pre-mRNA 117
RNA 31
snRNAs 131
splicing factors 117
src family tyrosine kinases 215
Staphylococcus: cell-surface proteins 136
statistical thermodynamics: protein folding energetics 1
Streptococcus: cell-surface proteins 136
Strider, DNA (CC) 187
subtilisin: intramolecular chaperones 443
sugar-facilitator proteins 13
β-superhelix motif 313
surface curvature: membranes (L) 81
synapsin I 327
synaptobrevin 325, 329, 453
syntaxins 124, 329, 453
synthetase, tRNA 362

T

T cell
blockage by immunosuppressive drugs 334
src family tyrosine kinases 215
T lymphocytes 140
targeting, proteins (BR) 191
targeting membrane fusion: membrane proteins 453
targeting subunits: protein phosphorylation regulation 172
Tat proteins 255
tau protein: Alzheimer's disease marker 480
tautomerism, nucleotides 160
tear-specific prealbumin (L) 206
technology and science, dictionary (BR) 190
tetanus neurotoxin 324, 327
TFIIIA 226
TGN *see trans*-Golgi network
TGN38 4, 397
thanatogenesis 157
thermodynamics, statistical: protein folding energetics 1
threonine dehydratases 297
thylakoid membranes, plants 415
thymocytes: apoptosis 307
titration curves: amino acids 69
top-down control analysis 26
toxins: membrane-insertion domain 391
trans-acting factor: yeast tRNA splicing 31
trans-activation *see* transcription
trans-Golgi network (TGN) 210
eukaryotic cells 395
vesicle budding 4
transcription
artificial regulatory systems 471
initiation 90, 117
multimeric complex dsDNA binding proteins 202
TFIIIA 226
transcriptional regulatory factors 90, 459
transducin 275, 293
acylation (L) 164
transfer RNA
protein synthesis (BR) 356
splicing 31
tertiary structure 362
transforming growth factor β2: structure 49
transglutaminase: activation by tetanus toxin 327
transition mutation 160
transition state theory 181
translation
bypassing in mRNA 294
initiation, rRNA–mRNA complementarity 406
initiation regulation 429
translational introns: gene expression regulation 294
translocation
α-sarcin loop role 155
Gram-negative bacteria 7
protein 456
transport
ER–Golgi 3
G proteins role 4
major facilitator superfamily proteins 13
transversion mutations 160
trefoil motif proteins 239
triacylglyceride ester hydrolases: molecular structure 20
triose phosphate isomerase 313, 372
trkA gene 51
tRNA *see* transfer RNA
tryptophanyl-tRNA synthetase 263
tumour necrosis factor: apoptotic cell death 308
twintrons: *E. gracilis* chloroplast genes 467
type I fructose biphosphate aldolase 36
tyrosine kinases
activation of Ras 273
src family 215

U

UhpC 13
ultracentrifugation: biomolecular associations 284
ultrasonic DNA ligation (CC) 446
unstructured polymeric domains 181
Usenet (CC) 398

V

vaccinia virus
NTP1 protein 291
VH1 phosphatase 6
VVH1 377
vesicle-associated membrane proteins 453
cleavage by neurotoxins 324
cleavage by tetanus toxins 327
vesicular transport
G proteins role 4
proteins (L) 248, 453
Rab6 protein 4
vibrational energy: proteins 71
viruses: fusion mechanisms (BR) 355
visual transduction: protein kinase C role 275
Von Ebner's gland protein (L) 206

W

wheat germ agglutinin 223
wobble base pairing 160
WRS gene, human 263

X

Xenopus
MAP kinase cascade 128
NOGGIN gene 208, (L) 424, (L) 425
TFIIIA 226
xyloglucan 213

Y

yeast
ERD-2 gene 3
HDEL receptor 3
Pep12p protein 124
PMP47 protein 427
SH2 domain (L) 464
tRNA splicing 31
Yersinia enterocolitica: Yop proteins 10
Yop proteins, *Y. enterocolitica* 10
Ypt proteins, *S. pombe* 4

Z

zinc endopeptidases
clostridial neurotoxins 324
tetanus toxins 327
